3Q22 Consolidated Results Announcement

Wah Lee's 3Q22 cumulative sales reached NT\$56,995 million, a 9.81% YoY increase and a record high cumulative 3Q sales in company history.

- Information Communication Technology 1.26% YoY decline:
 Consecutive US interest rate hikes, post-pandemic softer demands, and
 Chinese lockdowns have resulted in the slow consumer electronics
 market. Wah Lee's engineering plastics posted a YoY decline in sales.
 However, PCB raw material demands were supported by the needs of
 new generation server platforms launched by the two major CPU
 companies. In addition, 5G communication device such as switches
 and routers also required our high frequency substrates (CCL, copper
 clad laminate) to meet the product specs.
- Semiconductor 36.93% YoY increase: Wah Lee's semiconductor raw materials for the high end manufacturing processes, now into 3 nm, are playing a critical role in the semiconductor industry. We are also gaining more market shares in other semi customers' supplies in both Taiwan and China.
- FPD 4.98% YoY growth: Despite the recent price declining trends in the FPD industry, our next generation electronic products (electronic whiteboards) were still in good demands and are gaining more market shares from new customers. FPD upstream chemicals are in stable demands even though the utilization rate may fluctuate. They need a minimum level of chemicals to keep the production lines running.
- Green Energy 43.04% YoY increase: Green Energy c. 3Q22 sales reached NT\$2,027M. Lithium battery material sales grew substantially as Wah Lee supplied cathode and anode materials to both Taiwanese and Chinese Li-battery manufacturers. With close to 60MW of solar power capacity by yearend 2022, Wah Lee will be able to provide customers with carbon rights and strengthen its total solution provider position under the ESG requirements.

Cumulative 3Q22 EPS was NT\$9.16, record high c. 3Q EPS

Cumulative 3Q22 consolidated sales of NT\$56,995M set a record high. Consolidated c. 3Q22 gross profit was NT\$4,424M, resulting in gross margin of 7.8% which was lower than a year ago because of the price increase effect in FY2021 was alleviated. Operating expense ratio lowered to 3.90%, due to better economies of scale, and operating margin was 3.87%. Operating profit was NT\$2,203M. Non-operating profit was NT\$874M, contributed from steady profits recognized from long-term investment companies, such as CWE(8070.TT). Pretax profit totaled NT\$3,077M. Cumulative 3Q22 after tax and minority profit was NT\$2,162M, as compared to NT\$2,080M in 3Q21 and posted a 4.0% growth. c. 3Q22 EPS was NT\$9.16 and ROE reached 19.7%.

2022 Outlook

The local government anti-Covid-19 measures in eastern and southern China had caused some turbulences in the Company's 3Q sales from Chinese subsidiaries. However, in recent news reports, China government has openly announced the gradual alleviations of the strict rules of disease control. Therefore, it is expected that normal civil and corporate activities will resume soon and the demands will recover. Our views on the mega trends of fundamental technology industries remain intact. 5G (telecom and networking device), EV, AIoT, HPC (high performance computing), data center, cloud computing, and high end semiconductor manufacturing processes will continue to develop. Critical raw materials for the above-mentioned mega trends are actually getting more important for manufacturers to secure the supplies. Wah Lee's role in the overall supply chain has become more crucial. Products that Wah Lee supplies are summarized as below:

Wah Lee has been providing thermoset plastics (e.g. phenolic and PA9T) which are of high rigidity, high reliability, and high insulation capability. These plastics have been the first choice for major power supply manufacturers and have also penetrated into the applications of auto parts, EV electrical components, and EV charging stations. Moreover, optical grade plastics generate strong sales as more lenses and camera modules are used in smartphones and automobile ADAS systems. sector is leading in the provision of materials for 5G networks and IC substrate makers, which require high frequency, low Dk, low Df CCL substrates and high-resolution dry films for high precision circuitry. With the great demands from 5G and EVs and the additional IC fab capacity expansions, more semiconductor raw materials are in needs. Wah Lee, as the top supplier for the semiconductor industry in both Taiwan and China, has strong sales of photoresists, electronics grade chemicals, specialty gases, photoresist strippers, and CMP slurry driven by the strong industry demands. sales is also expected to grow because more on-line activities and the e-commerce promote the demands for large-screen LCD TVs and video conferencing displays. The schools also require a lot more of Wah Lee's next generation electronic products. Wah Lee's endeavors in the Green Energy sector will also pay off as suppliers and customers alike will need carbon rights for business continuities. Wah Lee's solar power capacities will provide the solutions and the ESS (Energy Storage System) business will serve as the last mile for the transition to the alternative energies.
